

HTML 101; A beginner's guide to coding

What is HTML?

- HyperText Markup Language
- It is **not** a programming language
- 100% of all websites use HTML
- HTML is the structure behind every website on the internet
 - It's the backbone behind every website
 - We layer code on top of HTML but without HTML there is no website
 - The first thing you should learn in web development is HTML
- HTML vs. HTML5
 - You will often see "HTML5"
 - Consider HTML and HTML5 to be the same thing these days
 - HTML5 is the 5th iteration on HTML, and there will not be an HTML6, so consider HTML and HTML5 to be the same thing
